IPCAexpo
2008

2-5, September, 2008
Bangalore, India

PCB DESIGNER CERTIFICATION PROGRAM WORKSHOP & EXAMINATION

Program organized by Electronics Designers' Council of India (EDCI)

This event is organized by Electronics Designers' Council of India (EDCI), council under Indian Printed Circuit Association (IPCA) and conducted by IPC Designers Council of USA. The two day workshop is an intensive program tutored by certified instructor from Designers Council, USA, which will prepare the designer to take the examination on the third day. Advance registration is strongly recommended for the certification program and the package includes study material which is supplied in advance to registered Designers.

Recognition for your accomplishments in the Electronics Industry

CERTIFIED INTERCONNECT DESIGNERS.. An educational event focused exclusively for circuit board designers, PCB Designer Certification Program.

A good Designer is worth his/her weight in gold when it comes to time and money saved. By qualifying designers on trends in technology, company can save valuable resources through improved quality and increased productivity. In a business climate where electronic projects grow in complexity and responsibilities are constantly expanding, certification stands as a clear testimony to designers' qualification, knowledge and skills.

Printed Circuit Board designers deserve the benefits and recognition of certification. Industry trends such as outsourcing and concurrent engineering are elevating the importance of the designer, more relevant for Indian companies seeking larger share of hardware development projects in the global market place.

Designers Day - One day Technical Seminar

This one day Technical Seminar is exclusive for Designers and covers advanced Design Topics like High speed design, EMI/EMC management and fabrication related issues. This will be a forum for exchange of technology and application related information among designers. We will have demonstration by leading software tool developers to learn new design concepts! Register now and help grow design technology. More details to follow...

Certified Interconnect Designer, C.I.D

This program assesses a designer's knowledge of how to transform a schematic into a reliable rigid PCB design, which can be easily manufactured, assembled and tested. The IPC Designers Council recognizes that the most effective designers must have a solid foundation in PCB fabrication and assembly. The certification test is based on several critical IPC documents that link design principles to the end product use of the printed circuit assembly.

What to know and how to prepare

Designers may prepare on their own and then take the exam, or enroll in a two-day IPC Designer Certification Preparation workshop. Designer certification testing is done on-site at workshop location the day after the course concludes. Individuals who do not feel prepared to take the test immediately after the preparation workshop may choose to keep their exam voucher and take the test at a later date. The workshop training provides an in-depth overview of the principles contained in the examination and is recommended for anyone interested in obtaining the certification.

About the Examination Process

The two-hour examination is in a multiple-choice format. Answer choices are all plausible, therefore, you must indicate the most correct answers. Occasionally, you must indicate multiple correct answers or identify certain characteristics from a diagram. The examination is graded and a review is conducted on-site. IPC issues and mails through EDCI the certifications within three weeks after an exam
